

The logo for 'Battle Showdown Gambit' is centered on a parchment scroll. 'BATTLE' is in large, white, 3D block letters with orange and yellow gradients and a cracked texture, set against a dark red, jagged background. 'SHOWDOWN' is in smaller, white, 3D block letters with a similar gradient and texture, also on a dark red background. 'GAMBIT' is in yellow, 3D block letters with a dark brown, wood-like texture, set against a dark brown, jagged background.

BATTLE SHOWDOWN GAMBIT

ART DESIGN DOCUMENT

GAME OVERVIEW

Battle Showdown: Gambit is a free-to-play, online 2D platform fighting game. Available in casual, competitive and custom modes! With over 40 unique characters, indulge yourself in the endless play styles available.

Battle Showdown: Gambit is a fast paced traditional fighting game where players achieve victory by eliminating the most number of players during a match. During a game, players infinitely spawn till the match timer ends. This creates opportunities for epic comebacks.

OVERALL ARTSTYLE

Though the aim is to incorporate the mascot of other projects into *Battle Showdown: Gambit*, there still needs to be a consistent style throughout the game.

The art style for *Battle Showdown: Gambit* is stylized, having cartoon/chibi-like features, avoiding any form of realism in characters and environments. Character proportions should be exaggerated with larger heads.

The overall style for the game is a take on a medieval guild, showcasing warm colors in a fantasy world.

The color palettes of characters and environments should not be too overly intense or mundane.

CHARACTER STYLE GUIDE

Character Set

Each character set contains the following.

- Body image (256x256 px)
- Left leg (256x256 px)
- Right leg (256x256 px)
- Weapon (256x256 px)
- Bullet (256x256 px)
- Icon (256x256 px)
- Head (200x200 px)

***Note**

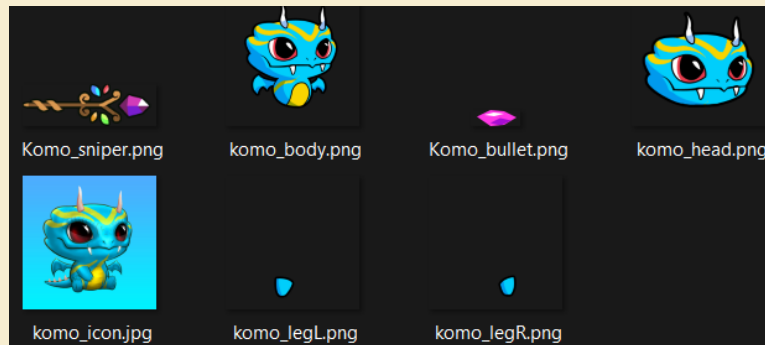

Do remember to name the files accordingly.

Eg.

character_body : komo_body.png

character_body : komo_LegL.png

Character Set Export Sample

CHARACTER STYLE GUIDE

Canvas Sizes

Final canvas size should be 256x256 px.
Character should be worked on a canvas at a minimum of 256x256 px or in a scalable format,

***Note**

Pixel art sprite sizes should be kept at multiples of 4.

Stroke

Character total outer stroke width: 2 px
Character inner stroke width: 1 px

***Note**

Stroke info above is in reference to a 100x100 px character canvas.

Pixel Art Character
Sample
Dreadbloater

Character Sample
Komo

CHARACTER STYLE GUIDE

Shading

Flat solid coloring, no gradients (Base, shadow, highlight)
100% opacity, no transparency.

***Note**

Shadow should be made using multiply blend at 40% opacity with the blue #0F5BD5

Orientation

Character should be at a $\frac{3}{4}$ profile view, facing right.

Character Ratio

Head : (Body + Legs) = 1:1

***Note**

No arms. Legs will be animated and rendered behind the characters body.

DO'S ✓

Use #0F5BD5, 40% opacity on multiply layer for shadows

***Vibrant colors**

DON'TS ✗

Use #000000, 40% opacity on multiply layer for shadows

***Muddled colors**

CHARACTER STYLE GUIDE

Weapon

Weapon should not fill entire canvas.

Canvas size: 152x64 px

Recommended max size: 120x52 px

***Note**

Having a weapon larger than the recommended size will result in an unbalanced weapon to character size ratio.

Orientation

Weapon should be horizontal, facing right.

Bullet

Bullet should not fill entire canvas.

Canvas size: 64x64 px

Recommended max size: 52x40 px

***Note**

All hitboxes are the same regardless of size.

Avoid single color for bullets

DO'S

Remain within the max canvas size.

***Visually balanced weapon, bullet and character size**

DON'TS

Fill canvas completely.

***Visually unbalanced weapon, bullet and character size**

MAP STYLE GUIDE

Map Set

Each map set should minimally contains the following.

- Base platform
- Small platforms
- Jump pads
- Acid/Moat
- Background
- Portals (Optional)

*Note

Do remember to name the files accordingly.
Eg. Background.png, Platform.png, etc.

No specific file size.

Recommended background size: 4016 x 2008 px

Scale platforms based on background size. Background should be the entire map.

Sample Map Design - Base Reskin/Degen

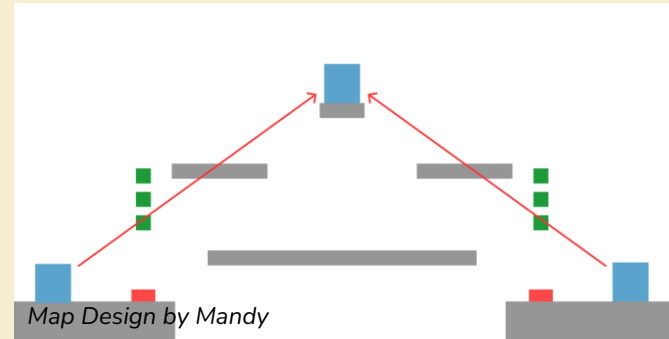

MAP STYLE GUIDE

Map Layout

The map should be a simple design which does not require too much constant weaving through platforms or obstacles

There should not be a weapon advantage in the map due to the layout.
(i.e, Shotgun advantage in cramped map, sniper disadvantage)

Sample 2v2 Map Layout

Unreleased 2v2 game mode. Cyber map

MAP STYLE GUIDE

Art Style

Map should be stylized in general.

All platforms/environment that players will collide with should be outlined with a **thin black outline** to differentiate background decor from interactables.

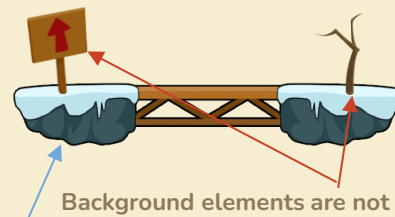

Map Background

Generally, the background should be stylized to suit the theme of the map.

However, it is alright to have a semi-realistic background as long as it is aligned with the theme and has a **strong blur** applied to it.

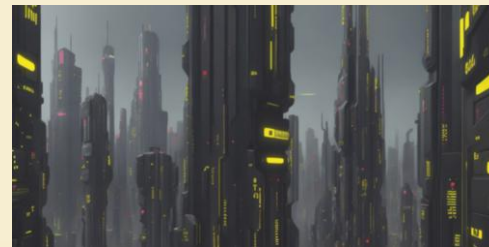

This is to prevent players from being distracted by the background while playing.

Holiday Heights Platform Sample

Platform is outlined in black

BNB Map Background Sample

MAP STYLE GUIDE

Parallax Background

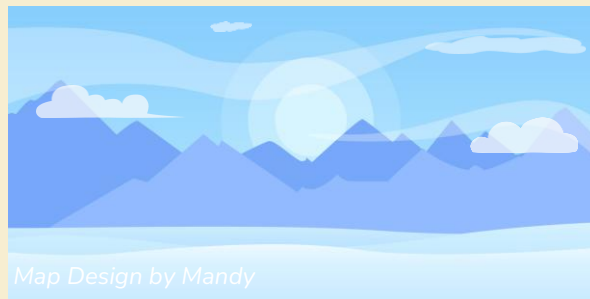

Though not a necessity, having a layered background adds depth to the map, giving players a more interactive experience.

In general, all layered elements should be in the background rather than foreground. This is to reduce clutter on the screen.

***Note**

Any overlays such as clouds and wisps that might be layered in front of platforms should be of 10% opacity at max.

Holiday Heights Background Sample

Layers (Back to front):

1. Background
2. Moon/Sun
3. Mountain 1
4. Mountain 2
5. Snowpile
6. Wisps
7. Clouds

ENVIRONMENTAL MOD GUIDE

Environmental Mod

Every map in Battle Showdown: Gambit should include an environmental mod within. The environmental mod serves as another layer of depth to the gameplay.

This environmental mod should not be luck based. All map mods should have a counterplay.

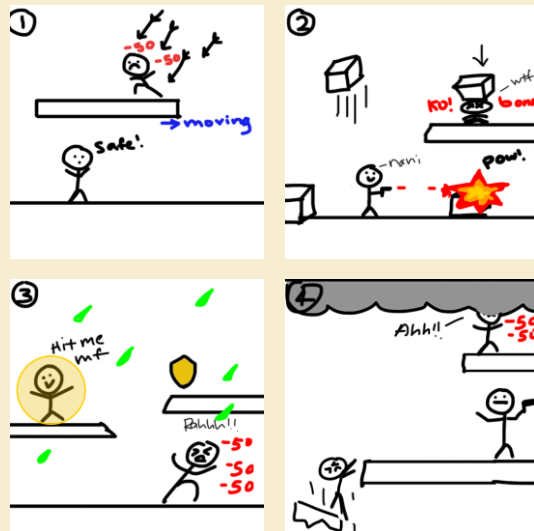

Sample Environmental Mod Set

Degen map:

FUD Crates descend from the sky throughout the game. Players squished by crates will be eliminated. Hide behind crates or explode them to damage your enemies.

Elements include:

- FUD crate
- Custom FUD explosion animation

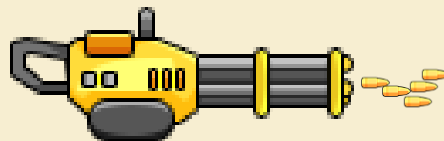

Rough sketch for environmental mods

SUPER WEAPON

Fantasy map super weapon: Amethyst Bow

Fantasy map super weapon: Amethyst Bow

Overview

Every map in Battle Showdown: Gambit should include a super weapon. These weapons serve as high risk high reward pickups. Since only one can exist at a time, it is highly sought after and makes the player a high priority target. At the same time, the super weapon is meant to deal insane damage.

***Note**

The super weapon has the same design specs as a regular weapon. Just fit it to the maps theme.
(Canvas size 152x64 px, max recommended size 120x52 px)

EQUIPMENT

Battle Showdown: Gambit Equipment

Overview

Every map in Battle Showdown: Gambit includes map pickups. These pickups differ based on their classes. There are offensive, defensive and utility equipment.

All equipment should be of 128x128 px canvas size.

The equipment should not be too eye catching or detailed. The colors should be limited to:

- Base
- Shadow
- Highlight

COSMETICS

Battle Showdown: Gambit cosmetics

Overview

Every character in Battle Showdown: Gambit are able to equip cosmetics. They are earned through collecting rewards and completing quests.

All cosmetic should be of 300x300 px canvas size.

No design specifications except having a noticeable outline.

No shading/color requirements but cel-shading is encouraged.

The cosmetic should be of exact size and placement to characters.

EMOTES

Battle Showdown: Gambit Emotes

Overview

Emote are equippable and used in games as a form of communication and/or form of banter. They are earned through collecting rewards and completing quests.

All emotes should be 256x256 px.

Emotes are required to have a black outline of 4 px and a white border of 6 px.

No shading/color requirements but cel-shading is encouraged.

The emote must not contain offensive material. Recommended to incorporate characters.

PROFILE PICTURES

Battle Showdown: Gambit Profile Pictures

Overview

Profile pictures are equippable and used in games as a form of personalization to set them apart from others. They are earned through collecting rewards and completing quests.

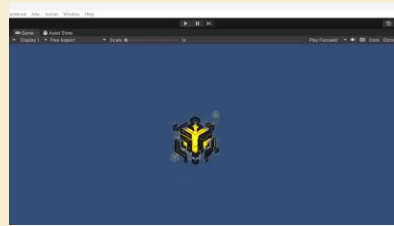

All profile pictures should be 256x256 px.

There should be a black outline of 8px

Corners should be rounded by 10px

No shading/color requirements so long as background suits the icon.

PARTICLE EFFECTS

Battle Showdown: Gambit Particle Effects

Overview

Particle effects are used in various elements in Battle Showdown: Gambit. The most common use case being cosmetics and map interactables (E.g, jump pads, portals and rocket launcher AOE)

Expectation

The particle effects should be stylized, not realistic. They should not be overly detailed to remain consistent with the overall art style.

The recommended amount of particles existing at a time is 10. Though not strict, it is advised to have less particles active at a time to reduce the possibility of lag and congestion on screen.

SPLASH ART

Overview

Splash arts are used for promotional use on social media, banners, etc. These artworks need not be accurate to the actual gameplay, assets or art style.

Battle Showdown: Gambit splash arts should exude excitement, chaos and fun on a battlefield. They should be exaggerated and bring a sense of drama. They should also be vibrant and visually appealing.

Though the art does not need to represent the contents of the game 100%, all characters in splash art should be from Battle Showdown: Gambit. Character designs should also be followed as closely as possible while maintaining a consistent art style.

SPLASH ART

Style Guide

The art style for the splash screens should be stylized. They should not be flat colors. Shading should be a mix of cel-shading and soft-shading.

Color palette used should not be overly saturated.

No outlines should be used for the splash art.

The art should typically show a battlefield where characters are fighting against each other, not PVE.

Though the art style of in-game characters are different, the splash art should illustrate them in the same art style for consistency.

Final artwork must be a high-res **(Minimum 2K) PNG**.

SPLASH ART

Composition, Layout, Setting

The main focus of the splash art should always be komo.

All characters should be in a combative pose to simulate an intense battle.

No specific composition as long as the illustration is adaptable in various formats, ratios, and purposes.

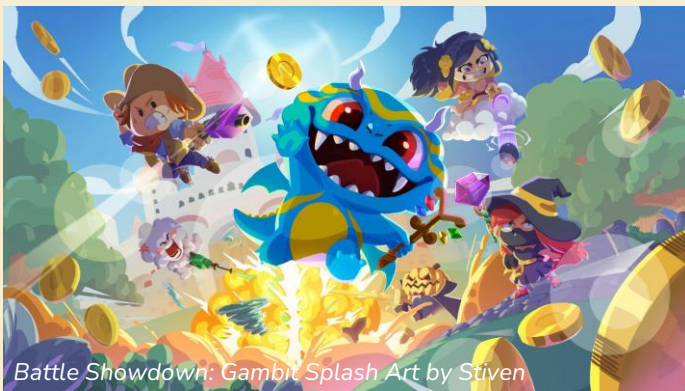

Expectations

- High-res (**minimum 2K**) PNG of final artwork.
- Working file (**.PSD**) with **separate, editable layers** (e.g. background, building, characters)
- If characters are stacked on top of one another, each character should be a **complete** and **separate** layer.

SPLASH ART

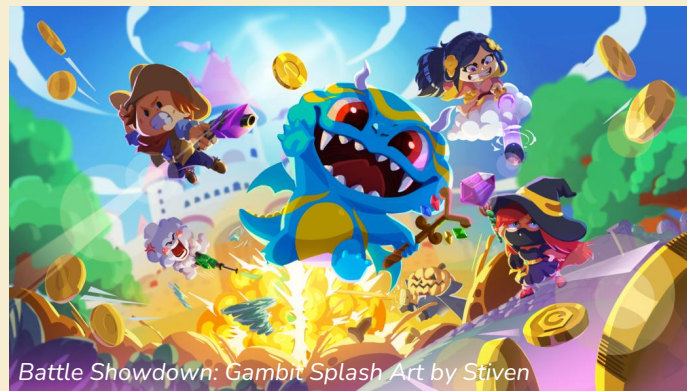

Splash Art Comparison

Battle Showdown: Gambit Splash Art by Stiven

Version 1:
Dull background and muted colors.
Difficult to know what to focus on first

Battle Showdown: Gambit Splash Art by Stiven

Version 2:
Vibrant and exciting scene.
Background is blurred to take away focus.
Lighting is more dramatic.

SPLASH ART

Splash Art Sample 1

Battle Showdown: Gambit Key Art by Stiven, edited by Mandy

SPLASH ART

Splash Art Sample 2

SPLASH ART

Feedback

- Looks unfinished, like a draft
- Pale colors, little contrast
- Not visually appealing
- Lack of depth
- Too much white
- Lack of details
- Muted colors
- No proper focus point
- Unappealing color palette

Overall, looks like a children's coloring book.
Artwork is nicely done but style does not fit Battle Showdown: Gambit's style requirements

Battle Showdown: Gambit Initial Splash Art by Stiven

SPLASH ART

Feedback

- Not in-game characters
- Too calm of a scene
- No action
- Nothing to focus on

Overall, a very nice composition with pleasant colors. However, the splash art does not depict the energy that Battle Showdown: Gambit is trying to portray. Unsure if this art is part of a lore or an upcoming character.

Needs context - either lore or a battlefield.

SPLASH SCREEN

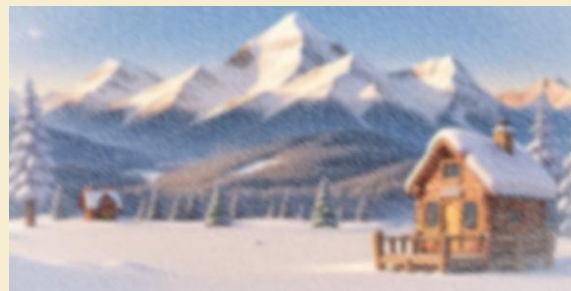

Seasonal/Event

Key/Recent splash art should primarily be the splash screen upon app launch.

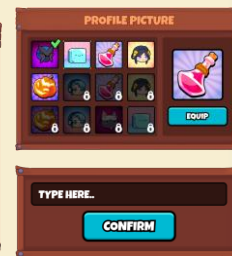

Exceptions are made during seasonal events such as Christmas, Halloween, Tournaments, etc.

Splash screens can range from a new featured map's background, a blurred thematic wallpaper, etc.

It is highly recommended that the splash screen used is a splash art for Battle Showdown: Gambit and splash screen should change routinely to remain fresh.

UI STYLE GUIDE - WOODEN CONTAINERS/ POPUPS

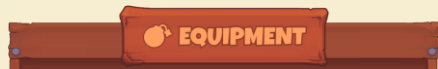

Section Containers

General Popups

Wooden Container/ Popups

This wooden version is used in **Section Containers** or **General** popups that may require user input (Confirmation/ Text Input etc).

Section Containers have an additional header container to distinguish it from the general versions

*Some of these general popups don't have any header

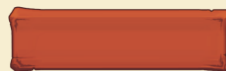

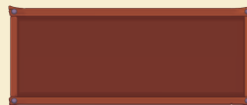

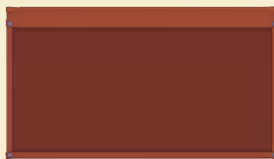

UI STYLE GUIDE - WOODEN CONTAINER ASSETS

Wooden Container 9-slicable

These assets need to be 9-sliced specifically so the asset details aren't stretched wrongly.

1. Wooden base with extra space top area
(Can be used in conjunction with header container or text)
2. Wooden base (Used for General popups)
3. Header container (Used in conjunction with 1.)

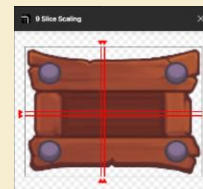

Stretched Asset

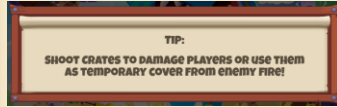

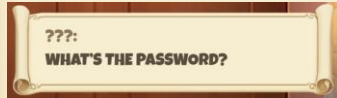

Asset

9Slice

UI STYLE GUIDE - PAPER CONTAINERS/ POPUP

Paper Container/ Popups

This paper version is used in **Informative** popups (Mainly displays information - tutorials, context, rewards, instructions tc.)

UI STYLE GUIDE - PAPER CONTAINER ASSETS

Paper Container 9-slicable

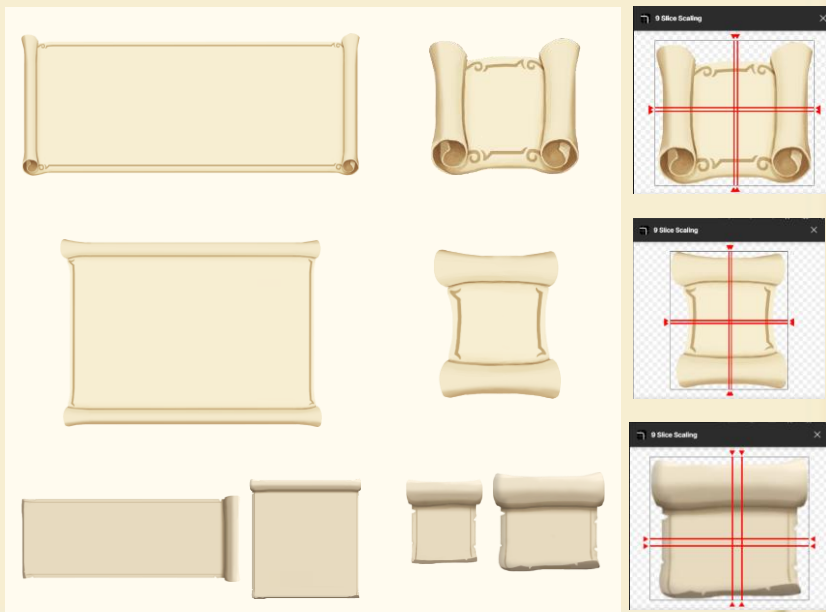

These assets need to be 9-sliced specifically so the asset details aren't stretched wrongly.

1. Large Paper (Horizontal view)
2. Large Paper (Vertical view)
3. Standard Paper
(2 variations of scrolled section thickness)

Stretched Asset

Asset

UI STYLE GUIDE - STANDALONE CONTAINERS

Standalone Containers

These standalone containers are mostly thematic in design & used for specific page.

The designs should loosely follow the function of the page - example: Stat/ passive skill page is designed to look like spellbook/ catalogue

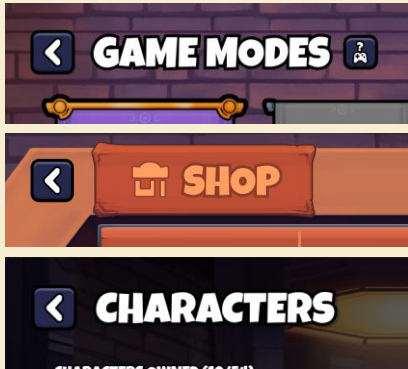

Character Filter container

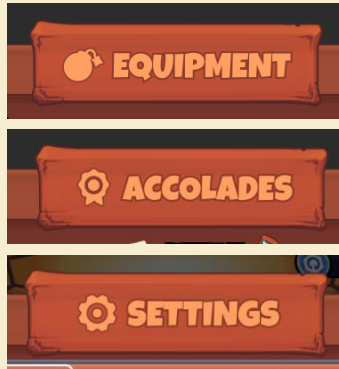

Spellbook Asset/ Stat-Passive skill page

UI STYLE GUIDE - HEADER TEXT

Section Header

Section Popup Header

Header Text (2 Variations)

These header text are used as section & section popup headers, to indicate which page/ popup users are on.

Page Headers

- Font: Luckiest Guy
- Font size: 112
- Fill color: White or #FF9F61
- Stroke color: Black or #8E3D2C

Section Pop Up Headers

- Font: Luckiest Guy
- Font size: 72
- Fill color: #FF9F61
- Stroke color: #8E3D2C

UI STYLE GUIDE - BODY TEXT

Body Text

These body text are mostly used in descriptions & key labels, they vary minimally in size/ font depending on container sizing or importance of information - Font size: 32 - 36

Warning: You will be disconnected after 15 seconds of inactivity

You have read the disclaimers and agreed to the terms set for Gambit.

**Explodes after a short delay
dealing 2600 damage to
surrounding enemies**

UI STYLE GUIDE - GENERAL BUTTONS

General Buttons (2 Variations)

These general buttons are used as call-to-action interactives across the app & are the most common. The 2 variations in sizing are to accommodate full screen & pop-up layouts.

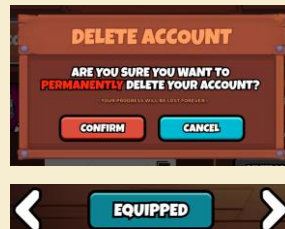

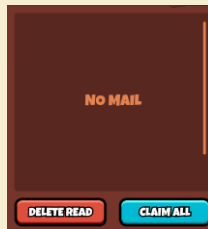

Button

- Button size: 360 x 120 px
- Font: Luckiest Guy
- Font size: 48
- Stroke: 6

Button

- Button size: 290 x 92 px
- Font: Luckiest Guy
- Font size: 36
- Stroke: 4

UI STYLE GUIDE - DIEGATIC BUTTONS

Diegatic Buttons

These diegatic buttons are used on the 2 home-screens, replacing the conventional use of general buttons. These diegatic buttons are designed to reflect their function thematically.

UI STYLE GUIDE - HUD

HUD

The HUD would mainly consist of the currency counters & settings button - they remain accessible on all screens.

ELS currency counter

Gold currency counter

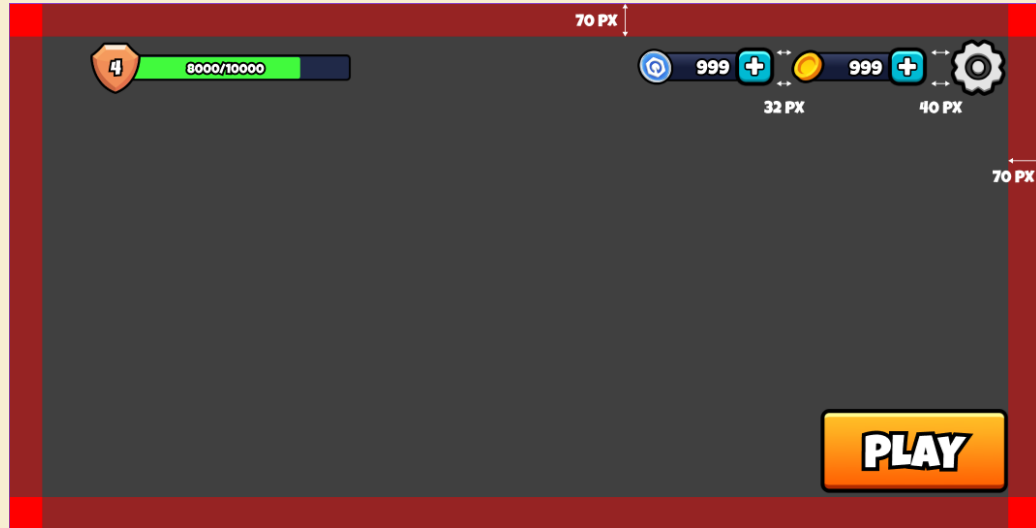

Settings button

UI STYLE GUIDE - HUD

HUD Padding

The HUD padding is minimally 70 pixels on all sides so that it won't be cut off when displayed in different screen sizes.

UI STYLE GUIDE - BACKGROUND

Background

Background asset dimensions are 2480 x 1121px - they are sized a little larger to accommodate different screen aspect ratios.

UI STYLE GUIDE - BACKGROUND

Background

The background are designed to be thematic and fit with whatever diegetic elements are on screen.
